

Proof before capital

A paper-only SPY options agent that binds authorization to the exact MLEG payload and trusts only reconciled broker state.

MATCHED

Golden order 24b16fe6... | client oc-63db2a... | sell 740P / buy 724P | limit -2.26 | fill -2.26

AI LOGIC

Fresh SPY evidence enters a constrained model. The model may return BULLISH, BEARISH, or NO_TRADE. It cannot choose contracts, size, price, or execution.

RISK GATES

Code selects a 3-10 DTE, \$5-wide vertical, binds a short-lived certificate to every payload byte, and rejects stale quotes, mutations, or account drift.

ALPACA INFRASTRUCTURE

Official Alpaca MCP submits one MLEG. Broker GET reconciles the same client ID. Unknown state halts the cycle and never creates a second order.

BROKER PAPER RESULTS

STRUCTURE	ENTRY	STATE	RESULT
793C / 809C	filled -2.11	closed via MCP	+\$58 approx.
768C / 769C	filled -0.51	closed via MCP	-\$2 approx.
740P / 724P	limit -2.26	price-bound MATCHED	open at Sep 1 snapshot

EXECUTION INTEGRITY

Payload mutation

symbol / side / ratio / qty / limit / intent change invalidates authorization

Ambiguous response

same client_order_id lookup, one submit, zero resubmits

Evidence

broker receipts, sanitized ledger, demo, and reproducible keyless assertions

HONESTY NOTE The first two entries used the wrong positive credit sign and remain FILLED. Only the third entry is price-bound MATCHED.
